

SPECIFIED PRODUCTS

- Weekly microcement floor cleaner
- Intensive microcement cleaner
- Sealant reviver

The sealant should have cured 2 weeks before using any maintenance cleaner.

During these 2 weeks:

- Do not cover with a matt.
- Be careful when moving heavy furniture

Use the Plastor sealant reviver to prolong the life of the sealant film. It protects from wear, revives faded surfaces and smoothes minor surface scratches.

Tools:

Microfibre mop. The material must be clean.

Floors conditions

In accordance with professional rules, only apply the sealant reviver on a clean, dry, degreased surfaces (without fatty substances such as silicone, wax), and free of any dirt, dust or other residue.

Perform a test on an inconspicuous area before treating the entire surface.

Preparation:

The Plastor brightener and reviver is ready to use, do not dilute it.

Implementation

Apply 1 to 2 coats with a clean microfiber mop. Allow to dry for 30 to 60 minutes between coats.

The room is ready to walk on after 1 hour.

Cleaning the tools:

Immediately after use, clean the tools with clean water.

Frequency of use:

Occasionally, or when the surface loses its brightness, reapply the reviver on clean floor.

The frequency of maintenance depends on attendance and use of the rooms:

- Bedrooms: 1 times per year
- Living rooms: 2 year
- Public Places: every 2 or 3 months
- Extreme traffic Locations: every month

The accumulations of plaster reviver can be removed with the intensive cleaner.
